

Maipú- Strategy or action plan

The Municipality of Maipú has been working alongside the INSSJP-PAMI on the guidelines of the Program “For friendly cities and communities with older adults”. This has enabled the team in charge, to develop skills and abilities that are necessary for the implementation of the Program. Moreover, and through this Program it is possible to interact with other functional areas of the public administration.

The Municipality of Maipú through this specific program has begun to develop working skills and policies oriented to our older adults for the first time. We are aware that for our Municipality to become age-friendly there is still a lot of work to be done; nonetheless we are looking forward on working on this Program alongside the other participants involved and build a community and environment that is truly friendly with our older adults.
