B4. Tobacco-related costs

B41. Do you have information on the economic burden of tobacco use in your population, e.g. the overall cost of tobacco use imposed on your society?
 Yes

B42. Please provide details (e.g. direct (health care-related) and indirect costs and, if possible, the method used to estimate these costs).

Metodología empleada: metodología de costeo mixta contemplando la posibilidad de estimar los costos de los eventos mediante un enfoque de micro o macro costeo.

Gasto total en salud (% PIB) 5.3%

El cáncer de pulmón (primer año), el seguimiento anual coronario y ACV (primer año), fueron valuados siguiendo un enfoque de microcosteo. El costo del cáncer de pulmón (primer año) corresponde a la estimación del protocolo de atención del Instituto Nacional de Enfermedades Neoplásicas (INEN) y el seguimiento (segundo año y subsiguientes) se valuó relacionando su mismo peso relativo sobre el costo del primer año en Argentina. Algunos costos se estimaron utilizando una proporción aplicada sobre el PIB per cápita en moneda local, representada por el peso de los costos de los eventos verificados en Argentina (15), Chile (16) y México (17) sobre el PIB per cápita en moneda local teniendo como fuente de información el Banco Mundial (<http://data.worldbank.org>). Los eventos costeados de esta manera fueron: infarto agudo de miocardio (IAM) (primer y segundo año), evento coronario (no IAM), seguimiento del ACV, neumonía y EPOC.

Asimismo, los costos de los tipos de cáncer restantes (excepto el de pulmón) se estimaron en referencia a la estimación realizada para el primer año y segundo año del cáncer de pulmón. Para ello se utilizó un método de consenso de expertos con metodología Delphi modificada para estimar la relación existente entre cada uno de los costos totales para la atención de cada cáncer y el costo médico directo del cáncer de pulmón.

Se consideró en la identificación y cantidades de recursos los registros de utilización del Hospital Nacional Cayetano Heredia y la Clínica San Felipe en Lima. Los resultados se ponderaron por sector, 90% sector público y 10% sector privado, contemplando de esta manera una perspectiva desde el sistema del sistema de salud del Perú. Finalmente, las estimaciones fueron ajustadas según inflación, empleando el índice de precios al consumidor (IPC) del Instituto Nacional de Estadística e Informática (INEI) para expresar los costos y resultados en moneda local (PEN) del 2015.
