

SAINT LUCIA STEPS Survey 2012

Fact Sheet

The STEPS survey of chronic disease risk factors in Saint Lucia was carried out from March, 2012 to August, 2012. Saint Lucia carried out Step 1, Step 2 and Step 3. Socio demographic and behavioural information was collected in Step 1. Physical measurements such as height, weight and blood pressure were collected in Step 2. Biochemical measurements were collected to assess blood glucose and cholesterol levels in Step 3. The Saint Lucia STEPS survey was a population-based survey of adults aged 25-64. A multi stage sample design was used to produce representative data for that age range in Saint Lucia. The data cannot be generalized to the population of Saint Lucia (response rate<60%) however it is representative of those sampled (n=1834). A repeat survey is planned for 2016 if funds permit.
