B121		Please indicate the smoking tobacco products included in calculating prevalence for question B12: Included are all tobacco products, excluding electronic cigarettes and heated tobacco. Included are both daily and non-daily use.
B122A		Please indicate the year of the data used to answer question B12: 2021
B122B		Please indicate the source of the data used to answer question B12: Health Survey/Lifestyle Monitor, Statistics Netherlands (CBS) in collaboration with National Institute for Public Health and the Environment (RIVM) and Trimbos Institute, 2021.
B123		Please provide a brief explanation of the trend in current smoking prevalence by age group in the past two years or since submission of your last report, if data are available. The smoking prevalence increased among 18-19 year olds and among those aged 75 and over, and it decreased in all other groups. Despite this, the smoking prevalence did not change significantly between 2019 and 2021 in any of the age groups. This is partly due to the small sample size within the age groups.

B163		Please provide the definition of “current smoking/tobacco use” used to answer question B16 in the space below. In the survey, respondents are asked if they had smoked at least once in their lifetime, had smoked in the past month, or smoke every day. Smoking status was collected through the following questions: ‘Have you ever smoked?’ and ‘On how many days in the past four weeks did you smoke cigarettes?’. Response options for the latter question were ‘never’, ‘1-2 days’, ‘3-5 days’, ‘6-9 days’, ‘10-19 days’, ‘20-29 days’, and ‘30 or more days’.
B164		Please provide a brief explanation of the trend in tobacco use by young persons in the past two years or since submission of your last report. The prevalence rates have remained about the same.an explanation is not easy: we think the COVID pandemy did play a role but also the tobacco industry is always active in finding replacement smokers and developing new products that appeal to youngsters.

B171		Please indicate the year and source of the data used to answer question B17. In 2021, respondents were asked to specify how often they used e-cigarettes and we only reported regular use. This 'regular' use includes current daily and non-daily use, but not former use.
B172		Please provide a brief explanation of the trends – in adults and in young persons – in the use of novel and emerging tobacco and nicotine products in the past two years or since submission of your last report. We have too few data from previous years to answer this question.

Daily exposure is about the same among men (3.3%) and women (3.0%). Weekly exposure is among among those 18-24 year old (19.7%, daily: 6.1) than among those aged 25-34 (11.1%, daily: 2.2%), and those aged 35 and over (6.8%, daily 2.9%).
