HIDDEN CITIES 2010

Self-perceived achievements and failures

What we MAY have done right

- 1) Raised awareness among decision-makers on the importance of health inequities in urban settings
- 2) Elicited the magnitude of health inequities in urban settings especially in low- and middle-income countries
- 3) Provided new tools and resources for local stakeholders to develop solutions in order to tackle health inequities
- 4) Created a wider partnership within development agencies to work on urban health

HIDDEN CITIES 2010

Self-perceived achievements and failures

What we MAY need to improve on

1. Better dissemination of the report through wider networks of professionals, media coverage
2. Sustained engagement of policy makers at the national and local levels to tackle health inequities
3. Raising the profile of urban health and health inequities within the broader global development agenda
4. Encompassing issues of interest to policy-makers in countries from all income categories: low, medium and high
