2011 Fact Sheet

The **2011 Lebanon GSHS** measured alcohol use; dietary behaviours; drug use; hygiene; mental health; physical activity; protective factors; and violence and unintentional injury.

The 2011 Lebanon GSHS was a school-based survey of students in grades 7th, 8th, and 9th. A two-stage cluster sample design was used to produce data representative of all students in grades 7th, 8th, and 9th in Lebanon. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 88%, the student response rate was 99%, and the overall response rate was 87%. A total of 2286 students participated in the Lebanon GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13- 15 years are included in the analyses for this fact sheet.
