

Trinidad & Tobago (Tobago)

2011 Fact Sheet

The 2011 Trinidad & Tobago (Tobago) GSHS measured alcohol use; dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The Trinidad & Tobago (Tobago) GSHS was a school-based survey of students in Forms 1-4. A two-stage cluster sample design was used to produce data representative of all students in Forms 1-4 in Trinidad & Tobago (Tobago). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 86%, and the overall response rate was 86%. A total of 1003 students participated in the Trinidad & Tobago (Tobago) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
