## 2005 Fact Sheet

The **2005 Chile (Region VIII Mun with Intervention) GSHS** measured alcohol and other drug use; sexual behaviours that contribute to HIV infections, other STIs, and unintended pregnancies; unintentional injuries and violence; hygiene; dietary behaviours and overweight; physical activity; tobacco use; mental health; and protective factors.

The 2005 Chile (Region VIII Mun with Intervention) GSHS was a school-based survey of students in grades 7<sup>o</sup> primary, 8<sup>o</sup> primary, and 1<sup>o</sup> secondary. A two-stage cluster sample design was used to produce data representative of all students in grades 7<sup>o</sup> primary, 8<sup>o</sup> primary, and 1<sup>o</sup> secondary in Chile (Region VIII Mun with Intervention). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 89%, and the overall response rate was 89%. A total of 1,859 students participated in the Chile (Region VIII Mun with Intervention) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
