

Colombia (Valledupar City)

2007 Fact Sheet

The **2007 Colombia (Valledupar City) GSHS** measured alcohol and other drug use; sexual behaviours that contribute to HIV infections, other STIs, and unintended pregnancies; unintentional injuries and violence; dietary behaviours and overweight; physical activity; and tobacco use.

The 2007 Colombia (Valledupar City) GSHS was a school-based survey of students in grades 7, 8, 9, and 10. A two-stage cluster sample design was used to produce data representative of all students in grades 7, 8, 9, and 10 in Colombia (Valledupar City). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 97%, the student response rate was 88%, and the overall response rate was 86%. A total of 2,095 students participated in the Colombia (Valledupar City) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
