

# Global School-based Student Health Survey

## Seychelles 2015 Fact Sheet

The 2015 Seychelles GSHS was a school-based survey of students in grades S1 - S5, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in grades S1 - S5 in Seychelles. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Seychelles GSHS measured alcohol use; dietary behaviors; drug use; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet.

The school response rate was 100%, the student response rate was 82%, and the overall response rate was 82%. A total of 2,540 students participated in the Seychelles GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.

	Students Aged 13-15 Years			Students Aged 16-17 Years			Students Aged 13-17 Years
