

Thailand Private 2015 Fact Sheet

The 2015 Thailand Private GSHS was a school-based survey of students in Grades 7-12, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in Grades 7-12 in Thailand Private. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Thailand Private GSHS measured alcohol use; dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet.

The school response rate was 97%, the student response rate was 91%, and the overall response rate was 88%. A total of 3,386 students participated in the Thailand Private GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
