

# Global School-based Student Health Survey

## Morocco 2016 Fact Sheet

The 2016 Morocco GSHS was a school-based survey of students in Grades 1 ASC - 2nd yr Bac, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in Grades 1 ASC - 2nd yr Bac in Morocco. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Morocco GSHS measured dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scannable answer sheet.

The school response rate was 98%, the student response rate was 93%, and the overall response rate was 91%. A total of 6,745 students participated in the Morocco GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
