

Argentina (Buenos Aires)

2012 Fact Sheet

The **2012 Argentina (Buenos Aires) GSHS** measured alcohol use; dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The Argentina (Buenos Aires) GSHS was a school-based survey of students in grades 8th EGB, 9th EGB, and 1st Pol. A two-stage cluster sample design was used to produce data representative of all students in grades 8th EGB, 9th EGB, and 1st Pol in Argentina (Buenos Aires). At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 81%, and the overall response rate was 81%. A total of 1039 students participated in the Argentina (Buenos Aires) GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
