

China – Chongqing (Ages 13-15)

Global Youth Tobacco Survey (GYTS)

FACT SHEET

The China - Chongqing GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components China - Chongqing could include in a comprehensive tobacco control program.

The China - Chongqing GYTS was a school-based survey of students in grade J1, J2, J3 and H1 conducted in 1999.

A two-stage cluster sample design was used to produce representative data for all of China - Chongqing. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 89.8%, the student response rate was 94.5%, and the overall response rate was 84.9%. A total of 2,279 students aged 13-15 participated in the China - Chongqing GYTS.

Prevalence

- 30.1 % of students had ever smoked cigarettes (Boy = 42.7 %, Girl = 19.2 %)
- 14.6 % currently use any tobacco product (Boy = 19.6 %, Girl = 10.2 %)
- 6.3 % currently smoke cigarettes (Boy = 11.4 %, Girl = 1.9 %)
- 9.6 % currently use other tobacco products (Boy = 10.8 %, Girl = 8.6 %)
- 5.5 % of never smokers are likely to initiate smoking next year

Knowledge and Attitudes

- 16.9% think boys and 7.3% think girls who smoke have more friends
- 25.1% think boys and 15.1% think girls who smoke look more attractive
