

Bolivia Valley

2012 Fact Sheet

The **2012 Bolivia Valley GSHS** measured alcohol use; dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The Bolivia Valley GSHS was a school-based survey of students in 2nd, 3rd and 4th grade secondary. A two-stage cluster sample design was used to produce data representative of all students in 2nd, 3rd and 4th grade secondary in Bolivia Valley. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 85%, and the overall response rate was 85%. A total of 1234 students participated in the Bolivia Valley GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
