### 2018 Fact Sheet

The 2018 Argentina Santa Cruz GSHS was a school-based survey of students in 8 primary/polimodal 1st high - 12 polimodal 5th high, which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in 8 primary/polimodal 1st high - 12 polimodal 5th high in Argentina Santa Cruz. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Argentina Santa Cruz GSHS measured alcohol use; dietary behaviors; drug use; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scanable answer sheet.

The school response rate was 96%, the student response rate was 66%, and the overall response rate was 64%. A total of 2,730 students participated in the Argentina Santa Cruz GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below.
