Summary

The Global Adult Tobacco Survey (GATS), a component of Global Tobacco Surveillance System (GTSS), is a global standard for systematically monitoring adult tobacco use and tracking key tobacco control indicators. GATS is a nationally representative household survey of adults 15 years of age or older using a standard core questionnaire, sample design, and data collection and management procedures that were reviewed and approved by international experts. GATS is intended to enhance the capacity of countries to design, implement and evaluate tobacco control interventions.

GATS is designed to produce national and sub-national estimates among adults across countries. The target population includes all non-institutionalized men and women 15 years of age or older who consider the country to be their usual place of residence. All members of the target population are sampled from the household that is their usual place of residence. All GATS countries use country-specific stratified multi-stage cluster sampling designs and an interview consisting of a household screening component and an individual component administered to the selected respondent. Data are collected using electronic handheld devices.

The current round of GATS Turkey survey was conducted in 2016 using a multistage stratified cluster sample design. The sample size was 11,200 selected households with 8,760 completed individual interviews. The GATS Turkey questionnaire included questions about background characteristics, tobacco smoking, water pipe, electronic cigarettes, cessation, secondhand smoke, economics, media, and knowledge, attitudes and perceptions. Questions were adapted in each section, and the questionnaire was administered using electronic devices.

Personally-identifying information has been removed from this data file to protect confidentiality. Due to the complex sample design, clustering, stratification and sample weights should be taken into account for data analysis in order to obtain proper point estimates and variances. The stratification, cluster and sample weight variables are gatsstrata, gatscluster and gatsweight, respectively. To access the GATS Turkey fact sheet, please visit: www.cdc.gov/tobacco/global/.
