2010 Fact Sheet

The **2010 Mauritania GSHS** measured dietary behaviors; drug use; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury.

The 2010 Mauritania GSHS was a school-based survey of students in grades 1ere, 2eme, 3eme, and 4eme du college. A two-stage cluster sample design was used to produce data representative of all students in grades 1ere, 2eme, 3eme, and 4eme du college in Mauritania. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 96%, the student response rate was 73%, and the overall response rate was 70%. A total of 2063 students participated in the Mauritania GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
