

Brunei Darussalam

2019 Fact Sheet

The 2019 Brunei Darussalam GSHS was a school-based survey of students in grades Year 7- Lower Six (Year 12) which are typically attended by students aged 13-17. A two-stage cluster sample design was used to produce data representative of all students in Brunei Darussalam. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Brunei Darussalam GSHS measured alcohol use; dietary behaviors; hygiene; mental health; physical activity; protective factors; sexual behaviors; tobacco use; and violence and unintentional injury. Students self-reported their responses to each question on a computer scannable answer sheet.

The school response rate was 100%, the student response rate was 62%, and the overall response rate was 62%. A total of 2400 students participated in the Brunei Darussalam GSHS. Prevalence estimates (percentages) and 95% confidence intervals are presented below for each age group to support cross-country comparisons.
