Summary

The Global Adult Tobacco Survey (GATS), a component of Global Tobacco Surveillance System (GTSS), is a global standard for systematically monitoring adult tobacco use and tracking key tobacco control indicators. GATS is a nationally representative household survey of adults 15 years of age or older using a standard core questionnaire, sample design, and data collection and management procedures that were reviewed and approved by international experts. GATS is intended to enhance the capacity of countries to design, implement and evaluate tobacco control interventions.

GATS is designed to produce national and sub-national estimates among adults across countries. The target population includes all non-institutionalized men and women 15 years of age or older who consider the country to be their usual place of residence. All members of the target population are sampled from the household that is their usual place of residence. All GATS countries use country-specific stratified multi-stage cluster sampling designs and an interview consisting of a household screening component and an individual component administered to the selected respondent. Data are collected using electronic handheld devices.

GATS South Africa 2021 was conducted in 2021 using a multistage stratified cluster sample design. The sample size was 7,245 selected households with 6,311 completed individual interviews. The GATS South Africa 2021 questionnaire included questions about background characteristics; tobacco smoking; electronic cigarettes; heated tobacco products; smokeless tobacco; cessation; secondhand smoke; economics; media; and knowledge, attitudes and perceptions. Questions were adapted in each section, then reviewed and approved by a questionnaire expert review committee. The questionnaire was administered using a software program developed by RTI International for electronic data collection using handheld devices.

Personally-identifying information has been removed from this data file to protect confidentiality. Due to the complex sample design, clustering, stratification and sample weights should be taken into account for data analysis in order to obtain proper point estimates and variances. The stratification, cluster and sample weight variables are gatsstrata, gatscluster and gatsweight, respectively. To access the GATS South Africa 2021 fact sheet and country report, please visit:

Tobacco Smoking

Question: B01

Type = Numeric

The following questions are about the use of different types of tobacco products. There are four categories of products that I will be asking you about separately: "classic" smoking tobacco products such as manufactured cigarettes and roll your own cigarettes; electronic cigarettes such as Twisp; heated tobacco products such as IQOS; and smokeless tobacco such as snuff and chew tobacco.

I would first like to ask you some questions about smoking tobacco, including manufactured cigarettes, roll your own cigarettes, cigars, cigarillos, pipes, waterpipes (hubbly bubbly) with tobacco. This includes all products where you burn the tobacco as you smoke it.

Do you currently smoke tobacco on a daily basis, less than daily, or not at all?

Value	Label	Frequency	Unweighted %
