

**GLOBAL SCHOOL-BASED STUDENT HEALTH SURVEY**  
**Solomon Islands**  
**2023 Fact Sheet**

The 2023 Solomon Islands GSHS was a school-based survey of students in Form 1 - Form 6 (typically attended by students aged 13 – 17 years). A two-stage cluster sample design was used to produce data representative of all students in Form 1 - Form 6 in Solomon Islands. At the first stage, 38 schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate.

The Solomon Islands GSHS measured alcohol use, dietary behaviours, drug use, hygiene, mental health, physical activity, protective factors, and violence and unintentional injury. Students self-reported their responses to each question on a computer scannable answer sheet.

The school response rate was 100%, the student response rate was 75.5%, and the overall response rate was 75.5%. A total of 1995 students participated in the Solomon Islands GSHS. Weighted prevalence estimates (percentages) and 95% confidence intervals are presented below.
