PQS performance specification

TITLE: Voltage stabilizer for mains electric refrigerators and freezers

Specification reference:	E007/VS01.1
Product verification protocol:	E007/VS01-VP.1
Issue date:	9 January 2012
Date of last revision:	Replaces PIS specification E7/VR.1 rev. 02.11.2000 and PIS specification E7/VR.2 rev. 01.01.1998

Contents:

1. Scope:

This specification defines the requirements for voltage stabilizers suitable for mains electric refrigerators and freezers.

2. Normative references:

For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3. Terms and definitions:

In writing: means communication by letter, fax or email.
Legal Manufacturer: The natural or legal person with responsibility for the design, manufacture, packaging and labelling of a product or device before it is placed on the market under his own name, regardless of whether these operations are carried out by that person himself or on his behalf by a third party.
Reseller: A commercial entity, licensed to act on behalf of a Legal Manufacturer, and which carries product liability and warranty responsibilities no less onerous than those carried by the Legal Manufacturer.

4. Requirements:

4.1 *General:*

Voltage stabilizer designed to provide a stable electricity supply for refrigerators and freezers in situations where the mains voltage is subject to wide fluctuations. The device must be compatible with both compression and absorption cycle equipment.

Alternative mains voltage and frequency combinations are also covered.

4.2 *Performance:*

4.2.1 Mode of operation

Both electronic and tap-changing technologies may be offered, but the device must be substantially maintenance-free. Products which incorporate cooling fans are not acceptable because of the maintenance issues involved in keeping the airways clear.

4.2.2 Nominal input and output voltage and frequency:

The device must provide one or more of the following four output voltage and frequency combinations when connected to a mains supply with one or more of the following nominal mains frequencies and voltage ranges:

Type	Nominal mains (input) voltage and frequency	Nominal output voltage and frequency
120/50	110, 115, 120, 127 volt; 50 Hz	120 volt; 50 Hz
230/50	220, 230, 240 volt; 50 Hz	230 volt; 50 Hz
120/60	110, 115, 120,127 volt; 60 Hz	120 volt; 60 Hz
230/60	220, 230, 240 volt; 60 Hz	230 volt; 60 Hz

Preferably the purchaser should be able to specify the nominal mains voltage within one these four voltage/frequency bands so that the manufacturer can optimize the product before delivery.

4.2.3 Input voltage fluctuations:

The device must tolerate the following minimum ranges of input voltage fluctuation in accordance with the table below:

Type	Minimum mains (input) voltage	Maximum mains (input) voltage
120/50	82 volts	159 volts
230/50	165 volts	300 volts
120/60	82 volts	159 volts
230/60	165 volts	300 volts

4.2.4 Protection voltage range:

Input:

The device must be able to tolerate spikes up to 230 volts (Type 120/50 and 120/60), or 450 volts (Type 230/50 and 230/60) without damaging the device and without triggering a cut-off.

Output:

The device must switch to 0 volts at the limits of the input voltage fluctuation range. When the input voltage is restored to a value within the applicable range shown in the table in specification clause 4.2.3, the output supply of 120/230 volts must be restored automatically after a delay of three to six minutes.

4.2.5 Capacity rating:
The device must be rated at a minimum of 1.0 kVA continuous running. Under fully rated load conditions there must be 10 successful starts out of 10.

4.2.6 Input frequency fluctuations:
The device must tolerate mains input frequency fluctuations up to ± 3.0 Hz.

4.2.7 Output voltage accuracy:
Maximum ±7.0% of the nominal output voltages set out in the table in clause 4.2.2, zero to full load, over the full input voltage range specified in the table in clause 4.2.3.

4.2.8 Corrosion resistance of enclosure:
Inherently corrosion resistant materials are preferred for the device enclosure. Where a metal enclosure is used, it must be treated to combat corrosion arising from high ambient humidity and floor washing activities.

4.2.9 Electrical safety:
Manufacturer to certify compliance with IEC 60335-1.

4.2.10 Electromagnetic compatibility:
Manufacturer to certify compliance with IEC 61000-6-3 ed2.0. Devices carrying the CE mark must also be certified to meet the requirements of Directive 2004/108/EC.

4.2.11 Robustness:
The device must withstand the vibration tests specified in IEC 60068-2-6 without suffering mechanical damage or functional failure.

4.2.12 IP rating:
Protection of the device enclosure not less than IEC 60529: IP32.

4.2.13 Markings:
The device enclosure must be clearly marked to show the following:

- Nominal input voltage and frequency.
- Nominal output voltage and frequency.
- kVA rating.

The top of the device enclosure must also carry a waterproof label carrying the following user information in minimum 18 point lettering and in the language requested in the order:

- 'Voltage stabilizer for compression cycle and absorption cycle refrigerators and freezers'.
- 'DO NOT connect more than one appliance'.

4.3 *Environmental requirements:*

4.3.1 Ambient temperature range during transport, storage and use:
-30°C to +60°C when the product is inactivated.
-5°C to +45°C during use.

4.3.2 Ambient humidity range during transport, storage and use:
5% to 95% RH, non-condensing.

4.4 *Physical characteristics*

4.4.1 Overall dimensions:
Refrigerators or freezers are typically spaced 20 to 30 cm clear of the adjacent wall. Voltage stabilizers are commonly placed on the floor behind the appliance. The plan dimensions of the device should reflect this arrangement.

4.4.2 Weight:
No restrictions.

4.5 *Interface requirements:*

4.5.1 Compatibility with electronic circuits:

Vaccine refrigerators and freezers may contain non-adjustable electronic thermostats and electronic thermometers. The voltage stabilizer must not produce supply disruptions and/or voltage jumps which could damage such components.

4.5.2 Power lead:

The product is to be supplied with a power lead with a sealed-on plug. The power lead must be at least 1.5 meters and not more than 2.0 meters in length. Both the plug and the output socket mounted on the device must be compatible with the electricity socket standard in the country where the equipment is to be installed.

4.6 *Human factors*

4.6.1 Generally:

The following minimum displays are required to indicate changes in voltage input and output:

- A green LED when the input voltage is greater than zero.
- An orange LED when the output voltage is greater than zero.

The product must be designed for use by untrained personnel, in accordance with the general principles laid out in ISO 20282-1. In particular, indicator lights and indicator light labelling must be designed so that interpretation is not confusing for colour blind users.

4.6.2 Control panel and thermometer:

Voltmeters or indicator lamps should be positioned on the front or top of the unit.

4.7 *Materials*

4.7.1 Restricted materials:

The product and its constituent components must not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated biphenyl ethers (PBDE).

4.8 *Warranty*

The product is to be covered by a two year replacement warranty in the event of any component failure arising from defective design, materials or workmanship.

`

4.9 *Servicing provision*

The product is to be designed to achieve a maintenance-free life of not less than 10 years, apart from occasional cleaning and the replacement of user-accessible fuses, if any.

4.10 *Disposal and recycling:*

The manufacturer is to provide information to the buyer on the hazardous materials contained within the system and suggestions for resource recovery/recycling and/or environmentally safe disposal. For the European

Union WEEE compliance in accordance with European Union Directive 2002/96/EC is mandatory.

4.11 *Instructions:*
User and maintenance instructions in Arabic, English, French, Mandarin Chinese, Russian and Spanish. The instructions are to be written for users and repair technicians and are to cover the following topics:

- installation procedures;
- routine maintenance tasks;
- diagnostic and repair procedures, including replacement of accessible fuses, if any;
- itemized list of spare parts including part numbers;
- end-of-life resource recovery and recycling procedures.

4.12 *Training:*
Not required.

4.13 *Verification:*
In accordance with PQS Verification Protocol **E007/VS01-VP.1.**

5. Packaging:
Materials used for packaging the finished product are to be free of ozone-depleting compounds as defined in the Montreal Protocol. The general specification of shipping containers will be subject to agreement with the individual procurement agencies.

6. On-site installation:
Not required.

7. Product dossier:
The legal manufacturer or reseller is to provide WHO with a pre-qualification dossier containing the following:

- Dossier examination fee in US dollars.
- General information about the legal manufacturer, including name and address.
- Unique identification reference for the product type.
- Full specifications of the product being offered, covering all the requirements set out in this document, including details of product marking and traceability.
- Photographs of the product clearly showing all sides of the device, including indicator lights and product identification labelling.
- Certified photocopies of all type-approvals obtained for the product, including CE marking and the like.
- Certified photocopies of the legal manufacturer's ISO 9001 quality system certification.
- Where relevant, certified photocopies of the legal manufacturer's ISO 14001 certification, EMAS registration or registration with an equivalent environmental audit scheme. Conformity with an environmental audit scheme is not mandatory; however preference will be given to

manufacturers who are able to demonstrate compliance with good environmental practice.

- Where available, laboratory test report(s) proving conformity with the product specifications.
- Indicative cost of the product per unit, EXW (Incoterms 2010).

8. On-site maintenance:

Maintenance will be carried out by the end-user and/or his agents.

9. Change notification:

The legal manufacturer or reseller is to advise WHO in writing of any changes which adversely affect the performance of the product after PQS pre-qualification has taken place.

10. Defect reporting:

The legal manufacturer or reseller is to advise WHO and the UN purchasing agencies in writing in the event of safety-related product recalls, component defects and other similar events.
