

# Annex 1

## **PMM CCE Sentinel Surveillance:**

### **Site selection criteria and expected sample size**

#### **Site selection criteria**

Leveraging available inventory, deployment and installation data the Surveillance Officer, in collaboration with National Authorities, will select sites using the following criteria:

- Range of CCE manufacturers: The sites selected should include a mix of prequalified equipment from the widest possible range of manufacturers in use in the country;
- Mix of CCEOP/Non-CCEOP equipment;
- Mix of health system levels: Sites should include both health facilities and district/regional storage facilities;
- Mix of hard/easier to reach areas and climate conditions;
- Mix of well performing/low performing areas: Sites should include health facilities with a range of vaccine coverage figures;
- Willingness and ability of staff to participate: The sites selected should have staff with sufficient knowledge and capacity to report accurately and willingness to be trained.

#### **Sample size**

The number of sites selected for surveillance will differ from country to country but should be aligned with the number sites feasible for one full time officer to monitor and collect data from through a combination of phone calls and routine and ad hoc site visits each month.

#### **Agreement on sites to be surveilled**

The final list of surveillance sites is to be endorsed in a formal agreement with the National Authorities.
