

WHO Prequalification Programme WHO PUBLIC ASSESSMENT REPORT (WHOPAR)

Inmazeb¹

International Nonproprietary Name (INN):
atoltivimab, maftivimab, and odesivimab 50 mg/mL solution for infusion in a vial

Abstract

INMAZEB 50 mg/mL solution for infusion in a vial manufactured at Regeneron Pharmaceuticals, Inc. was submitted to be considered for prequalification in 2023 when the product was licensed / registered in U.S.A. and subsequently accepted for inclusion in the WHO list of prequalified products for the WHO-recommended indications, treatment of infection caused by *Zaire ebolavirus*, on the 16 Nov 2023.

The “WHO Procedure for Prequalification of BTPs or their corresponding SBPs”² defines specific evaluation mechanisms for products approved by regulatory authorities, which apply similar stringent standards for quality, safety and efficacy as those required by WHO.

The prequalification of this product by the WHO Prequalification of Medicines Programme is based on the approval by U.S. FDA (<https://www.fda.gov>) in line with the “WHO Guidelines on submission of documentation for abridged assessment”³.

Hence, no assessment of the data underlying this approval has been undertaken within the WHO Prequalification Team Medicines (PQTm). However, according to the above-mentioned guideline WHO requested additional data for the safe use of the product in regions relevant for prequalified products and this information is included in part 6b of this WHOPAR. In order to safeguard product quality throughout its entire intended shelf-life, WHO assessed the evidence to verify the adherence to the principles outlined in the most recent version of the WHO guidelines on the international packaging and shipping of vaccines⁴, also partially applicable to other biotherapeutic products, to demonstrate suitability of the packaging to regions outside of climatic zone II. WHO assessed the packaging procedures for international shipments, the validation protocols and reports of the shipping boxes used for supply of the prequalified product.

In addition, the adequacy of the procedures for handling quality complaints and recalls with the inclusion of restrictions on distribution or recalls of the product in regions relevant for prequalified products was evaluated by the assessment team.

Furthermore, in accordance with the relevant guideline³, a WHO prequalification-specific addendum to the Risk Management Plan (RMP) was submitted and assessed by the team of

¹ Trade names are not prequalified by WHO. This is the National Medicines Regulatory Authority’s responsibility. Throughout this WHOPAR the proprietary name is given as an example only.

assessors. With this addendum the Applicant outlined their approach how to identify the risks of the product and which measures will be applied to monitor and minimize such risks, taking into consideration potential differences in the health care setting that may change the benefit/risk profile defined within the SRA settings.

Country-specific adaptation and implementation of the RMP as detailed within the PQ-specific addendum to the RMP should be put in place by the Applicant.

This WHOPAR refers to the information available at the approving stringent regulatory authority in terms of the assessment of the quality, efficacy and safety as well as steps taken after the prequalification.
