Information for the patient

[MA201 trade name][†]

Artesunate Powder for solution for injection 30mg

If you are a carer or parent looking after the person who takes this medicine, use this leaflet to give the medicine correctly and take note of the warnings and side effects.

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

- Keep this leaflet. You may need to read it again.
- If you have questions about the medicine, ask your health care provider.
- This medicine is for you only. Do not pass it on to others. It may harm them, even if their illness seems to be the same as yours.
- If you get any side effects, talk to your health care provider. This includes unwanted effects not listed in this leaflet. See section 4.

What is in this leaflet

1. What [MA201 trade name] is and what it is used for
2. What you need to know before you take [MA201 trade name]
3. How to take [MA201 trade name]
4. Possible side effects
5. How to store [MA201 trade name]
6. Contents of the pack and other information

1. What [MA201 trade name] is and what it is used for

[MA201 trade name] is a medicine used to treat severe malaria in adults and children. It contains the active substance artesunate and is made up into a solution that is given by injection.

Malaria is caused by infection with a parasite called *Plasmodium*, spread by the bite of an infected mosquito. [MA201 trade name] is used only when the infection is severe enough that it cannot be treated with medicines by mouth.

Your health care provider will follow the most recent official guidelines on the use of malaria medicines to select the right medicine for your malaria treatment.

2. What you need to know before you are given [MA201 trade name]

[MA201 trade name] should **not be used** if you are allergic to the active substance or any of the other ingredients of this product (see section 6).

Warnings and precautions

After you have been treated with [MA201 trade name] to bring down the most severe symptoms of your malaria infection, you will need to take malaria medicines by mouth to complete the treatment.

Some people treated with this medicine have developed increased breakdown of red blood cells in the body after treatment has finished, leading to low red blood cell levels within the first month after therapy. This has been seen most often in small children and travelers. Your health care provider may carry out blood tests to check for this for the first few weeks after treatment.

[†]Trade names are not prequalified by WHO. This is the national medicines regulatory agency's responsibility.

Taking other medicines

Please inform the health care provider if the patient is taking or has recently taken any other medicines, including medicines bought without prescription.

Pregnancy and breastfeeding

Pregnancy

Severe malaria is especially dangerous during pregnancy, so if you need treatment with [MA201 trade name] it will be given to you. Use during pregnancy is not expected to cause harm to you or the unborn baby.

Breastfeeding

A small amount of the medicine enters human breast milk, but if you are well enough to breastfeed this is not expected to cause any problems for your baby. However, there is not enough medicine to protect the child from malaria.

3. How [MA201 trade name] is given

Artesunate is given by injection into a vein or into a muscle (usually the muscle of your thigh). The dose is based on your weight. Your health care provider will work out the right dose to give.

Treatment is given for at least a day, until you are well enough to be treated by malaria medicines taken by mouth.

If you have any further questions on the use of this product, ask your health care provider.

4. Possible side effects

Like all medicines, [MA201 trade name] can cause side effects, but not everybody gets them. Some of these may be difficult to detect, and may be similar to effects of the disease itself.

Very common side effects (may affect more than 1 in 10 people)

Low red blood cell counts (anaemia), changes in levels of blood cells called reticulocytes, damage to red blood cells that may happen up to one month after treatment has finished, especially in young children and visitors from areas without malaria

Common side effects (may affect up to 1 in 10 people):

Dizziness, altered ability to taste, headache, slow heart rate (bradycardia), low blood pressure, cough, runny nose, vomiting, pain in the belly (abdomen), cramps, diarrhoea increased levels of liver enzymes and a substance called bilirubin seen in blood tests, yellowing of the skin or eyes (jaundice), blood pigment in urine, reduced kidney function, joint and muscle pain, fever.

Uncommon side effects (may affect up to 1 in 100 people):

Loss of appetite, flushing, nausea (feeling sick), constipation, severe painful rashes with flu-like symptoms (Stevens-Johnson syndrome), itching, rashes, tiredness, pain at the injection site.

Not known (frequency cannot be estimated from the available data):

Breakdown of blood cells (immune haemolytic anaemia), altered electrical activity in the heart (QT prolongation), severe allergic reaction (anaphylaxis).

Anaemia (low red blood cells) may occur within one month after treatment. It has been reported especially in young children and in travelers. If you feel excessively tired, weak or short of breath up to 4 weeks after treatment, inform your health care provider.

Reporting of side effects

If you get a side effect, talk to your health care provider. This includes side effects not listed in this leaflet. You may also be able to report such effects directly to your national reporting system if one is available. By reporting side effects, you can help to improve the available information on this medicine.

5. How to store [MA201 trade name]

Keep this medicine out of the sight and reach of children.

Do not store above 30°C. Keep the vial and ampoule in the provided carton to protect from light. Do not refrigerate or freeze.

The reconstituted solution should be stored below 30°C and should be used within one hour.

This medicine must not be used after the expiry date stated on the vial and ampoule after 'EXP'.

This medicine must not be used if description of the visible signs of deterioration.

Do not throw away any medicines in wastewater or household waste. Ask your health care provider how to throw away medicines you no longer use. These measures will help protect the environment.

6. Contents of the pack and other information

What [MA201 trade name] contains

- The active ingredient is artesunate. No other excipients.
- Each ampoule of solvent for reconstitution contains arginine, bicarbonate, phosphoric acid and water for injection

There is too little sodium in this medicine to have any effect, even if you are on a low-sodium diet.
