WHO GUIDELINES FOR THE
Treatment of Genital Herpes Simplex Virus

Since the publication of the World Health Organization (WHO) Guidelines for the management of sexually transmitted infections (STIs) in 2015, the evidence base on the treatment of genital Herpes Simplex Virus (HSV) infection has continued to evolve. The World Health Organization (WHO) has updated these guidelines to reflect the latest evidence and to provide guidance for countries on how to implement evidence-based treatment for genital HSV infection.

The objectives of these guidelines are:
- to provide evidence-based guidance on treatment of genital HSV infection;
- to support countries to update their national guidelines for treatment of genital HSV infection.
