WHO has published an updated version of the SPAR tool second edition. This version reflects changes made in line with lessons learned from the COVID-19 pandemic. The WHO Secretariat hosted a technical working group involving representatives from States Parties and partners in order to review SPAR and provide recommendations for updating the tool.

The SPAR tool second edition in English is available at: <https://www.who.int/publications/i/item/9789240040120>

Detailed information on the e-SPAR platform can be found here: <https://extranet.who.int/e-spar>.

VOLUNTARY MONITORING AND EVALUATION

The IHR Monitoring and Evaluation Framework outlines the various mechanisms for monitoring capacities required under the IHR and underscores the mutual accountability, transparency, experience sharing and dialogue between Member States and WHO which contributes to global health security. The items below indicate the plans for implementing the voluntary components of the Framework. The voluntary components of the Framework include joint external evaluations, simulation exercises and after-action reviews.

A. JOINT EXTERNAL EVALUATIONS

Supporting documents to facilitate the orientation of the JEE process to stakeholders and support JEE implementation have been under development to accompany the updates to the JEE Tool second edition, which was published in January 2018. Supporting documents, previously available in English, are now available in French, Russian, and Spanish. Continue to check back on the links below for additional translations and updated documents.

B. TRIPARTITE OPERATIONAL TOOLS: JOINT RISK ASSESSMENT; MULTISECTORAL, ONE HEALTH, COORDINATION MECHANISM; SURVEILLANCE AND INFORMATION SHARING

In 2019, the Tripartite (FAO, OIE and WHO), launched the Tripartite Zoonoses Guide (TZG) to provide guidance and best practices for addressing zoonotic diseases in countries. Three operational tools are available (or in development) and can be used independently or in coordinated efforts to support national capacity for zoonotic disease preparedness and response. The Joint Risk Assessment (JRA OT) is published and available for national workshops. Two additional tools are in development and include the Multisectoral, One Health, Coordination Mechanism (MCM OT) and Surveillance and Information Sharing (SIS OT). More information on the TZG and OTs are available on the [website](#).

RISK PROFILING

Strategic Risk Assessments are undertaken before an event occurs. A strategic risk assessment is used to guide risk-informed programming that will catalyse action to prevent, prepare for, and reduce the level of risk associated with a particular hazard and its consequences on health. Actions that stem from a strategic risk assessment can include the prioritisation of limited resources, in-depth capacity and vulnerability assessments, development of emergency response and contingency plans, and the implementation of preparedness and risk mitigation activities.

The WHO Strategic Toolkit for Assessing Risks (STAR) has been published and is available at the following link <https://www.who.int/publications/i/item/9789240036086>.

The STAR toolkit supports countries in identifying all-hazard preparedness and disaster risks. STAR also facilitates the development of robust policies, strategies and plans to address the vulnerabilities that countries can face in terms of health emergencies and disasters.
